The gradually slowing action mode can energize most of the  
pectorals major muscle, while minimizing the involvement of the  
anterior deltoid.

Two motion arms have limits and adjustable knobs which can be  
adjusted to different positions for arm muscle group.

It can energize different pectoralis major muscle group by  
forward and backward bidirectional motions, and transfer the  
power to the specific muscle directly.

The seat can be adjusted to the user's desired range of motion  
when used.
